Customer Reviews

This book â œLetâ s Get Charged (All About Electricity)â • (5th Grade Science Series) belongs to a Childrenâ s book series published by Speedy Publishing. We love Speedy Publishing Childrenâ s book series as they usually come with excellent photos and basic references that are quite suitable for the underage, for those small family members at home, for those parents who love to teach their children at home and this type of books serve well for teaching purposes at school too. This book is written with short references will show any reader about the Electricity that gives a wide variety of well-known effects, such as lightning, static electricity, electromagnetic induction and electric current. The society relies on electrical power as electricity is a force caused by electric charges that push and pull on each other making the electricity flow possible. Several ways of

electric power is shown with fun facts in beautiful graphics/photographs which are depicted on this. As this book has beautiful, full colored, high detailed, photographs/pictures you may want to share with your kids and/or students as they can serve as point for further discussions or a way to develop language skill by promoting the children to express themselves about what they see and understand by looking at the photograph or picture. Disclosure: I received this product on a promotional discount for my honest review and they are 100% my own opinions; of course, I do understand that your own opinion may differ from mine and I do respect that in any way. I haven't received any kind of compensation and I am not required to give a good review. I am also not associated with the seller in any way.

Another Baby Professor book with some cool pictures. There are about 200 books in this ebook series that are offered in the kindle store for either free or for .99. You can't really go wrong with the books offered for free. There is a variety of subjects covered and most of the books follow about the same format. You can take a peek inside the books by clicking "Look Inside" and this is pretty much what you get in each book. This particular book is ok. The format for this book is the same as most of the Baby Professor books in this series which have a picture with a paragraph and facts on one page. Then the next page is just a photo. It would be nice if they had another paragraph on that page too. I mean it's great they have a picture of an abacus and talk about it. But then the next page is just a picture of another abacus. It would be very simple to talk about how one is used by sliding the beads. I wish the book wouldn't show someone touching a lightbulb that is on and with a screwdriver placing it in unknown hole. Not a big deal to me hopefully as my kids are older and I will eventually read this with them and explain why not to do something like that but I think it's something off to have in a children's book. Anyway, overall, I do like these books for their wonderful pictures. It would be nice if the books went into more detail but they are very basic books that I hope will get my kids interested in finding more about each subject. It will be pretty neat for my kids to be able to see the progression of the computer and how a computer used to take up entire rooms! I plan on keeping these books on my iPad for down time for my kids when they get bored waiting different places like the doctors office or practice for a sibling.
